# How can I increase throughput for the Azure Injector

The Azure Injector has a Push Policy property that can be used to increase the throughput of the Injector.

The Push Policy defines which endpoints to push to.

- If PUSH_TO_ALL is selected, every endpoint that is part of this set will receive all messages.
- If PUSH_TO_ANY is selected, only one of the endpoints that is part of this set will receive any given message.

> ⚠️ Additional endpoints will need to be added to your Azure IoT Hub, IoT Edge, Event Hub or IoT Central to take advantage of the PUSH_TO_ANY policy

As an example, three end points configured and five messages published:

- With PUSH_TO_ALL, all three end points will receive all five messages (3x5 = 15)
- With PUSH_TO_ANY, only one of the end points, and it could be anyone, will get a message (1x5 = 5)
