

Nightly Module Builds

The stable versions of the modules should be downloaded from the [Inductive Automation Strategic Partner Modules](#) download page.

However, sometimes it is helpful to have the latest nightly build of a module for the latest features and/or bug fixes. The nightly module versions are always based on the last official release plus all bug fixes that have been made on top of the last official release.

Nightly modules do not undergo the full suite of testing and should generally not be used in production environments.

- **Ignition 8** compatible nightly modules
 - [MQTT Distributor](#)
 - [MQTT Engine](#)
 - [MQTT Transmission](#)
 - [MQTT Recorder](#)
 - [AWS Injector](#)
 - [Azure Injector](#)
