Ignition Compatibility with Cirrus Link Modules

⚠ **When installing Cirrus Link modules in Ignition, all module versions must match. If they are not, class loading issues may result in system instability. Always make sure all Cirrus Link module versions match in an Ignition Gateway.**

Encoding changes were made in MQTT Transmision 4.0.28 to properly handle Array, Document and Dataset Property Types. If you are receiving this data with MQTT Engine you will need to update to 4.0.28 or newer.
