

EFM Export

The EFM Export Module provides EFM data connectivity to Flow-Cal. The EFM Export module receives EFM information via MQTT that includes the Alarms, Events, Configuration and QTR records from flow computers accessed by the Cirrus Link EFM protocol drivers. This data is passed and put in the proper formation and placed into transaction queues for automatic ingest and analysis by Flow-Cal, the industry leader in gas and liquid measurement software application. The process can be seen by the diagram below.

More information including installation instructions can be found in the links below.
